

Right-hand heart valve

The graph shows a sinusoidal wave oscillating around a horizontal axis. Two points, t_1 and t_2 , are marked on the x-axis with vertical dashed lines extending to the curve. t_1 is at a point where the curve is below the x-axis, and t_2 is at a point where the curve is above the x-axis. The wave starts at a positive value on the y-axis, crosses the x-axis, reaches a minimum, crosses the x-axis again, reaches a maximum, and then crosses the x-axis a third time.
